# Traveling to Uppsala

Estimated CO2e emissions\*

# 1715 Tons

Equivalent to  
**18,3%**

of participant's yearly CO2e.  
From 6.9% to 240.8% range.

On average, each participant contributed **1.62 tons** of CO2e while traveling to Uppsala.

**Over 54%**  
planned to mitigate their CO2e while travelling to ISBNPA 2023

**More than 61%**  
of participants reported that their institutions lack a plan for CO2e emissions.

\*Included in the analysis:  
913 participants (72,7% of the current registration).

# Travel Mitigation

## Recommendations

As an individual you can:

### Sustainable Aviation Fuel (SAF)

Endeavor to collaborate with airlines that provide this option.

Explore lower CO<sub>2</sub>e travel methods for attendees, such as:

Passenger Ferry

Rail  
(preferably Electric or Hydrogen-powered)

Bus  
(preferably Electric or Hydrogen-powered)

Electric Vehicle (EV) car

The ISBNPA can:

### Promote Virtual Attendance

for attendees with the highest emissions.

Consider geographically locating the conference

to minimize distances and emissions.

Explore the possibility of **hosting regional conferences** to reduce travel-related emissions.
